

Fork Mounted Skip Compactor

Product information

The Fork Mounted Skip Compactor is designed to achieve optimum skip capacity. Waste is usually deposited into the yard skip and taken away once full. However, in most cases the skip is 30-45 percent full of fresh air. The Skip Compactor significantly reduces this and subsequently reduces the number of collections required and money spent on doing so.

Standard Features

- Adjustable height to suit up to 8 foot deep skips
- Heel pin locking for safe attachment to forklift truck
- Robust and sturdy construction
- Painted bright orange for safety
