COLIFT Mounting Shaft

Product information

The COLIFT Mounting System is designed for lifting and handling of precast concrete columns or beams on the construction site. The COLIFT Mounting System is intended for lifting and tilting up concrete elements from the ground.

It can also be used simultaneously in pairs for lifting long and heavy beams. The remote function of the COLIFT Mounting System enables the lifting device to be released from ground level without requiring an additional elevated working platform.

The system’s versatility makes it possible to attach it to precast elements of various dimensions and to use different types of slings.
