

Vacuum Slab Laying Machine JUMBOMOBIL JM-VARIO

Product information

The JM-VARIO is a robust vacuum slab laying machine designed for fast, precise and ergonomic positioning of concrete slabs, natural stone, large pavers and similar heavy elements. Mounted on a compact yet sturdy mobile chassis with heavy-duty pneumatic wheels, it features a long-reach articulated boom (approx. 3.9 m) that rotates for flexible handling and placement. The machine's powerful vacuum lifting system with petrol engine, enabling effortless lifting and exact alignment while minimizing manual effort and speeding up installation. Ideal for landscaping, paving and large outdoor projects, it ensures high productivity and reduced physical strain on operators.

Features:

- Extremely easy and light laying as the lifting and setting down are done by a vacuum hose lifter.
- Exact positioning of slabs by means of a smooth-running pillar swing crane with low dead weight.
- Slabs which have already been laid can easily be lifted again.
- Can easily lay up to 400 square metres a day.
- With knuckle boom for safe and quick installation even along house walls.
