

Sliding Beam Anchor RGA22

Product information

The RidgeGear RGK26 Sliding Beam Anchor is a reusable mobile anchor device designed to provide a secure attachment point on horizontal steel beams. The anchor travels freely along the beam with the user, maintaining continuous mobility while remaining connected to the structure.

Best used for:

- Fall protection on horizontal steel beams in construction, industrial and maintenance environments.
- Applications requiring continuous movement along an overhead beam without repositioning the anchor.

Product benefits:

- Sliding design moves smoothly with the user along the beam.
- Adjustable to suit a wide range of steel beam flange widths.
- Durable galvanised steel construction withstands demanding industrial environments.
- Tool-free installation enables quick attachment and removal.
