

Anchorage Sling Slingky RGK26DC

Product information

The RidgeGear Slingky Anchorage Sling is a temporary anchorage device designed to create a secure anchor point around suitable structural members for work at height. Manufactured from high-strength polyester webbing with reinforced protective sleeves, it provides a flexible anchorage solution where permanent anchor points are unavailable.

Best used for:

- Creating temporary anchor points around beams, columns and other suitable structural members.
- Construction, maintenance and industrial work where portable anchorage is required.

Product benefits:

- High-strength polyester webbing provides a durable temporary anchor solution.
- Reinforced protective sleeve helps reduce wear around contact surfaces.
- Lightweight, flexible design packs easily for transport and storage.
- Available in multiple lengths to suit different structural anchor points
