Adjustable Work Positioning/Restraint Lanyard Dorado RGP-2

Product information

The RidgeGear RGP-2 Dorado is an adjustable work positioning and restraint lanyard designed for maintaining a stable working position or preventing access to fall hazards. Suitable for use on sloping surfaces, rooftops and leading-edge applications, it provides precise length adjustment for controlled positioning when used with compatible harnesses.

Best used for:

- Work positioning on structures using compatible EN 358 harnesses with side D-rings.
- Restraint applications on rooftops, sloping surfaces and leading-edge work where access to fall hazards must be restricted.

Product benefits:

- Precise adjustable length supports accurate work positioning.
- Aluminium adjuster without moving parts enhances durability.
- 11 mm polyamide rope resists abrasion in demanding environments.
- Polyester wear sleeve extends rope service life on work positioning models.
- Lightweight design with ergonomic adjuster allows smooth, controlled adjustment and easy handling.
