

Twin Leg Elasticated Webbing Lanyard with Shock Absorber RGL9

Product information

The RIDGEGEAR RGL9 is a twin leg fall arrest lanyard with integrated shock absorber, designed for workers who need continuous attachment while moving between anchor points. Its elasticated webbing reduces hanging slack to help minimise trip hazards and entanglement, making it suitable for demanding work at height applications.

Best used for:

- Tower climbing, steel erection, scaffolding and maintenance on open structures.
- Work at height requiring continuous attachment when transferring between anchor points.

Product benefits

- Twin leg design enables continuous connection during anchor point transfers.
- Elasticated polyester webbing reduces slack for improved movement and fewer snag risks.
- Integrated energy absorber limits fall arrest forces to below 6 kN.
