# Twin Leg Webbing Lanyard With Shock Absorber RGL3

## Product information

This twin leg fall arrest safety lanyard is produced using our anti-bacterial protection webbing.

An industry standard, and usually the minimum equipment issued/required with a harness for anyone working at height.

The extra leg allows progression between anchor points by means of double clipping, and also optimum safety by ensuring the user is always connected.

The shock absorber pack will deploy in the event of a fall limiting the impact force on the user.

This system is generally used for tower climbing, steel erecting, scaffolding and maintenance to open structures.

*This safety lanyard must be used in conjunction with a safety harness.*
