

LIFTING GEAR UK
GROUP LTD

On Site Lifting Equipment Inspector

About The Role

Are you an experienced Lifting Engineer based in or around the North West area ready for your next career move to a Company that really values your contribution?

As a Lifting Equipment Engineer you'll be responsible for carrying out on-site inspections on lifting equipment and lifting accessories, in accordance with LOLER Regulations, as well as on site testing of beams and anchor points. You will also assist local depot's with workshop duties such as: inspection, test and run, repairs and servicing on equipment in our hire fleet, and for customers equipment. .

You will carry out fault finding procedures, recognise the defective items, conduct the necessary repairs effectively and restore the equipment to a safe working condition.

We are looking for candidates who are motivated and keen to learn about our specialist products and build their industry knowledge, along with:

- Carry out inspection on various types of Lifting equipment in accordance with LOLER & PUWER
- Service Repair and Inspect Lifting equipment on customer sites and the companies workshop
- Complete necessary paperwork in line with the companies set procedures
- Adhere to Quality, Health and Safety Environment regulations

About You

If you join the team we will provide you with everything you need and ensure you are equipped for success. We will talk to you about your training and personal development needs and what you'd like to do to further your career and support your future aspirations.

To succeed as a Lifting Engineer you will bring the following skill-set and behaviours

- Experience of carrying out Lifting Equipment inspections on items including Chains, Slings, Shackles, Manual/Powered Hoists, Lifting Beams, Runway Beams plus various other forms of Lifting and Handling Equipment
- LEEA Qualifications or time served in relevant industry is advantageous
- Good Understanding of method statements and risk assessments
- Full UK Driving Licence
- Attention to detail and accuracy when completing inspection paperwork
- A good understanding of the fundamentals of general engineering required
